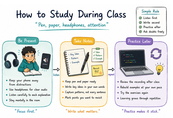
# Agentic 3.0

Video
Audio
Screen

THe whole Idea is that you are able to understand the complete s

Be on Time - 8 am IST
I will not wait beyond 8:05.



All the notes
& Codes
will be shared
with you.

Zoom

Chat would be One Way

We will follow Pomodoro technique

15-20 minutes of teaching + 5 minutes of Doubt

There would be one break around 9:30 ( 10 - 15 mintues)

After 11 am, we will have a dedicated Doubt Sessions

Session Recordings will also be shared ofc with all resources.

Session 1 - Python AI

First 4 Class

1. Python AI
2. Pydantic
3. GenAI vs AI vs Agents
4. Project using Python

Python
VS Code
UV
Terminal

claude

groq or openrouter
or Free Trials of
software/services

Please try to avoid office Laptop

pip or venv or conda

UV

10-100x faster than pip etc.

\+ Packages

we use pip
uv conda or
venv

Development happens best on Terminal

Windows doesn't have a terminal by default - it has cmd/poweshell

Till now , we should have

Python
UV
Vscode
Terminal

Installed

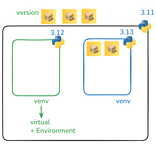
5 other alternatives

Best Technology
or Practice

Package Manager

Project Manager

Which helps to
install packages

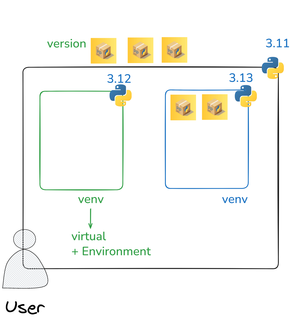


Windows 11

GTA 6

Windows 7

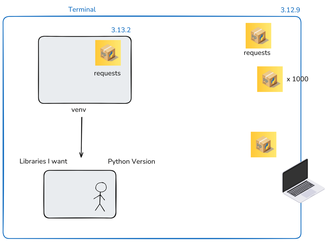
You should be atleast on Python 3.10+

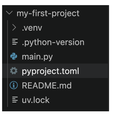


```
nayanikMayanks-MacBook-Pro ~ % python3 --version
Python 3.13.2
nayanikMayanks-MacBook-Pro ~ % python --version
Python 3.12.7
nayanikMayanks-MacBook-Pro ~ %
```

Both should be just 3.10+

2007, 2016, 2013,2022





| File / Folder | Created by `uv init`? | Purpose | Should you edit it? |
|---|---|---|---|
| `.venv/` | ✅ Created by `uv init` or `uv sync` | Contains the virtual environment. It includes the Python interpreter, installed packages, activation scripts, etc. This isolates your project's dependencies from the system Python. | No |
| `.python-version` | ✅ | Stores the Python version that this project should use (e.g., `3.12`). If you have tools like `pyenv` or `pyenv-win` installed, entering the directory automatically selects this version. | Rarely |
| `main.py` | ✅ | A simple starter Python file created by `uv init`. It's just an entry point where you can begin writing your application. | Yes |
| `pyproject.toml` | ✅ | The heart of a modern Python project. It contains project metadata (name, version, description), dependencies, build configuration, scripts, and tool configurations (e.g., Ruff, Black, Pytest). | Yes |
| `README.md` | ✅ | Documentation for your project. Usually explains what the project does, how to install it, and how to run it. GitHub displays this file automatically. | Yes |
| `uv.lock` | ✅ (after adding dependencies or running `uv sync`) | Lock file that records the exact versions of every installed dependency, including transitive dependencies. Ensures everyone installs the exact same environment. | No (generated automatically) |

1. Many people, pre-requisites to be cleared.
2. For advance people, just give me 2-3 classes and we will be in line.
3. We will create a lots and lots of projects in this batch, so I want all of you to spend a lot of efforts in understanding things.
